

VPAT Summary Report – Simple Booklet

This report is a summary of the Voluntary Product Accessibility Template (VPAT) for a specific product. It is intended to offer a quick view of the technical information in the VPAT and offer guidance for the product’s use in compliance with WCAG 2.1 level AA, for those less familiar with WCAG.

About

Reviewed by unit: Digital Learning
Innovations (DLI)

Report Date (from VPAT): 8/13/2025

Date Reviewed: 7/17/2026

Highest Standard Used: WCAG 2.1

Access Type: Requested from vendor

Application Name: Simplebooklet

Description and Primary Purpose or Most Common Use Case of Application:

Simplebooklet is a cloud-based SaaS platform that enables individuals, businesses, and organizations to create, publish, and share interactive digital booklets, brochures, catalogs, and presentations.

Compliance Scope:

Application is accessed by end user
directly (e.g. D2L, Banner, etc.): **No**

Application produces content accessed
by end user through other platforms (e.g.
Adobe InDesign, etc.) **Yes**

Overview and Recommendation

According to the VPAT, this is how many criteria are supported, partially supported, or not supported in the A and AA tables.

Supports: **36**

Partially Supports: **6**

Does Not Support: **0**

Not Applicable: **4**

Initial Concerns and Recommendation:

The software itself supports the items, but users are responsible for ensuring the content they create and link to within the software remains accessible. There are also some functions in the tool's editor that are not fully keyboard accessible for the authors and rely on drag and drop.

Recommendation (See [term definitions](#)): **Use workarounds and accessibility features**

Workarounds and Compliant Use Options

In order to maintain WCAG compliance, we recommend the following:

Users are responsible for the content created within the tool, so effort must be made to ensure that anything authored or linked to within the course complies with accessibility best practices. In addition, consider caution when using/interacting with the items below:

- **1.1.1 Non-text Content** – Tool provides fields and prompts for user to add alternative text to non-text items, but author is responsible for making sure alt-text is available and appropriate.
- **1.2.1 Audio-only and Video-only** – Tool does not auto-generate captions for video or audio content that the user embeds. Author is responsible for making sure that captions, transcripts, and/or audio descriptions are available in the platform where the content is hosted.
- **1.2.2 Captions (Prerecorded)**– Tool does not auto-generate captions for video or audio content that the user embeds. Author is responsible for making sure that captions, transcripts, and/or audio descriptions are available in the platform where the content is hosted.
- **1.4.10 Link Reflow** – Because the viewer replicates a page-spread, some complex layouts may require horizontal scrolling on small screens. Authors should avoid these complex layouts whenever possible.
- **2.1.1 Keyboard** – Some of the functions in the editor portion of the tool are not fully keyboard accessible, including features which necessitate dragging and dropping content.

Recommendation term definitions

- **Recommend find alternative:** The VPAT reveals accessibility gaps that are so numerous or severe that the application would be difficult or impossible to be used in a compliant manner.
- **Use cautiously with workarounds:** Minor accessibility gaps may be present but are limited to certain features. Avoiding using those features or modifying use of the application may help maintain compliance.
- **Use workarounds and accessibility features:** Minor accessibility gaps may be present but are limited to certain features. Avoiding using those features or modifying use of the application may help maintain compliance. Tool must be configured properly for compliance or contains accessibility features that must be used correctly to ensure compliant product.
- **Use accessibility features:** Tool must be configured properly for compliance or contains accessibility features that must be used correctly to ensure compliant product.
- **No concerns. Application is ready:** The tool has no accessibility concerns and should produce accessible content with minimal effort.
