# KSU Restroom Access Policy

Purpose: All members of and visitors to the KSU community should be assured equal and safe access to restrooms. Accordingly, each new building will be designed and constructed to have at least one single-occupancy, family-friendly, unisex, ADA-compliant public restroom.

Scope: Every member of the campus community will benefit from the availability of safe, comfortable, and appropriately featured restroom facilities. Implementation will primarily impact KSU Facilities as they plan, design, and execute future construction projects.

Policy: Kennesaw State University (KSU) policy is that each new building be designed and constructed to include at least one single-occupancy, family-friendly, unisex, ADA-compliant public restroom. Accessible restrooms should also be designed and constructed for all major building renovations that include extensive wall and restroom demolitions. Any waiver or variance from this policy requires written approval from the KSU president. Existing restroom modifications and upgrades to improve accessibility for those with mobility impairments may be made without building a new single-occupancy restroom. A KSU priority is to increase the number of policy-compliant restrooms along with the growth of the campus community.

Locations of Unisex Restrooms on the **Kennesaw Campus**

Locations

Science Building
